

**Amendments to the Claims:**

This listing of claims replaces all prior versions, and listings, of claims in this application.

**Listing of Claims:**

- 1-5. (Cancelled).
6. (Previously Amended) A target holding device comprising:
  - a housing having a target exposure region and a target storage region, wherein the housing comprises a front wall and a back wall, the front wall has a V-shaped cross section;
  - a mounting member attached to the housing, wherein the mounting member positions the housing so that the target storage region is located above the target exposure region; and
  - a guide rail disposed within the housing along the target storage region and the target exposure region, wherein the guide rail is configured to allow movement of targets from the target storage region to the target exposure region.
7. (Original) The target holding device of claim 6, further comprising one or more windows disposed on a front wall of the housing in the target storage region.
8. (Original) The target holding device of claim 7, wherein each of the windows corresponds with a position of a target within the target storage region.

9. (Original) The target holding device of claim 7, wherein each of the windows has a short dimension and a long dimension.
10. (Previously Amended) The target holding device of claim 6, wherein the front wall includes a plurality of windows, each of the plurality of windows is configured to expose a portion of a target behind the front wall.
11. (Original) The target holding device of claim 6, wherein the housing includes a rough surface.
12. (Original) The target holding device of claim 6, wherein the mounting member includes at least one leg.
13. (Original) The target holding device of claim 12, wherein the at least one leg includes a bent region.
14. (Original) The target holding device of claim 6, wherein the mounting member includes a chain.
15. (Previously Amended) A target holding device comprising:  
a housing having a left wall, a right wall substantially parallel to the left wall, a back wall substantially perpendicular to the left wall and the right wall, and a front wall joining the left wall and the right wall, the left wall and the right wall extend from a target storage region of the housing to a target exposure region of the housing, the back

wall and the front wall extend fully in the target storage region but forms an inverted U-shape opening in the target exposure region, wherein the front wall has a V-shaped cross section.; and

a mounting member attached to the housing, wherein the mounting member is configured to position the target storage region above the target exposure region.

16. (Original) The target holding device of claim 15, wherein the housing includes a translucent wall.

17. (Original) The target holding device of claim 15, wherein the front wall of the housing includes a surface configured to ricochet projectiles that impact upon the surface at an angle relative to an incoming direction of the projectile.

18. (Previously Amended) The target holding device of claim 17, wherein the front wall includes a plurality of windows, each of the plurality of windows is configured to expose a portion of a target behind the front wall.

19. (Original) The target holding device of claim 15, wherein the front wall includes at least one window.

20. (Original) The target holding device of claim 15, wherein the front wall includes a rough surface.
